

HairTesting

We provide a drug and alcohol testing service to medico-legal professions for use in family, criminal law, child protection and social services matters.

Hair testing offers a unique window of detection for drugs and alcohol. It allows you to look back months rather than days to 'rule in' or 'rule out' drug use in a specific case.

Most Common Drugs Tested For

- Cannabis
- Cocaine
- MDMA (Ecstasy)
- Opiates
- Amphetamine
- Barbiturates
- Methadone
- Methamphetamine
- Benzodiazepines

- Please note that we can also test other substances including Steroids, Ketamine, Buprenorphine, LSD, GHB, Flunitrazepam (*Rohypnol*), Fentanyl, Meperidine, Khat, Psilocine, Phencyclidine and Alcohol (*to detect abuse levels*). Some of these specialist tests are exclusive to our laboratory. Please contact us to discuss any specific requirements you may have. Some of these substances cannot be detected effectively by the normal ELISA screening method and will therefore require direct chromatographic methods of analysis to give a legally defensible result.

HairTesting

ScreenSafe UK is an established company with a proven track record in Drugs and Alcohol testing. Our laboratory has been testing for drugs of abuse for over 27 years and is the pioneer of modern techniques. Hair testing is unique in its ability to look back months rather than days at drug use, making it essential in child residence, protection orders, family and criminal cases. By providing information on exposure to drugs over time, hair analysis can be useful in verifying self-reported histories of drug use in any situation in which a past history of drug use is desired. During controlled tests of hair, a drug user is not able to hide the fact that they abuse drugs. Once ingested, the drug remains in the hair as a permanent record. All our testing methods have been validated and published in peer-review journals (*available on the internet*). Our team, which includes the President of the International Association of Forensic Toxicologists and key members of the Society of Hair Testing, has published over 100 articles on this topic.

Expert Witness Statement

An Expert Witness Statement provides essential support at court.

A detailed explanation of positive results. All results are supported by a full toxicological report.

Expert Witness attendance at court is also available, if required.

Collection Service

If delays in proceedings are to be avoided it is critical that test specimens are taken correctly. With our own nationwide team of qualified Collection Officers, we can collect hair samples for you under strict Chain Of Custody conditions anywhere in the UK, ensuring:

- Every sample is taken from the right location on the head or body
- The appropriate amount of hair is taken
- All associated documentation is completed to the required standard
- Every sample is safely dispatched to the laboratory for analysis

All samples are treated with strictest confidence. All reports are confidential and results will be relayed by prior arrangement. Our independent collection service guarantees the efficacy of the analytical process so that accurate evidence can be presented promptly, and via a reliable professional source.

Results Reporting

Quick, secure and reliable results reporting within 10 working days from sample receipt at the laboratory.

FastTrack service available on request.
