

RandomSelecta

Random Selection Software

The RandomSelecta was specially developed as a fast and inexpensive way to randomize employee names and employee/NI numbers to establish a legally defensible random selection for drug and alcohol testing.

The RandomSelecta is widely used for random personnel selection for drug and alcohol testing programs, job rotations or any other applications that call for a fair random selection process.

Whether you choose to do your random selections in house with The RandomSelecta or utilize our unique bespoke selection services, the methodologies are compliant with the U.S. Department of Transportation (D.O.T.) specifications for random selection and testing of personnel. With The RandomSelecta you can easily perform random name selections and random test date selections as well as track results. Key features include:

- Random Name Selection
- Random Test Date Generation
- Easy To Use Interface
- Random Testing Results Tracking
- Works with Any Size Group
- Works with Multiple Company Sites

This easy to use application is ideal for:

- Employee Testing Programs
- School Testing Programs
- Athletic/Sports Team Testing
- Personnel/Human Resource Departments
- Lottery draws
- Contests requiring random draw
- Any environment where truly random selection is crucial

How The RandomSelecta Works

The RandomSelecta is the only tool you need for fair random selection of employees, staff, students, athletes or any personnel involved in testing programs. Whether you're testing for drugs, alcohol or need to generate random name lists for job rotations, The RandomSelecta is fast, easy and fair.

The RandomSelecta is a Windows-based application that utilizes a spreadsheet-based record system allowing you to work with existing personnel files or easily create new files in a familiar spreadsheet format. Appropriate for testing single or multiple groups, The RandomSelecta creates randomized name lists with the click of a button.

Additional Features

In addition to the basic steps there are other capabilities and tasks that The RandomSelecta can perform. For example, after you do your random draw, you can assign random test dates to each individual. There are date presets for random dates at a year interval, quarterly, monthly or you can enter any period of time you'd like, so if you need to assign random test days for the next week, simply enter 5 (or 7) in the days control and click to generate random dates spanning the next 5 days - the dates are assigned at random and matched with each person on your random list. You can sort your random list by date to find everyone that needs to be tested on a specific date.

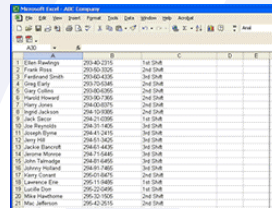

Test Results/Auditing

You can open your randomized lists at any time and enter test result notes for auditing and record keeping, you can also sort the list by name, date, or result. This gives you the capability of finding everyone in a given list who has tested positive in the past time interval. If your testing program was to ever be audited, you can easily open, print, and/or export your random test records.

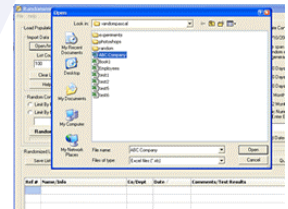

To summarize, The RandomSelecta is super-easy to use and extremely versatile. It's fast, fair and inexpensive, runs on Windows 95, 98, Me, NT, 2000, and XP and will run over a network.

In addition to The RandomSelecta Software, we offer fair, secure random selection services for a low monthly fee (please contact for set rates). By utilizing our services you can be sure of a completely objective and non-discretionary method for 3rd party testing selection.

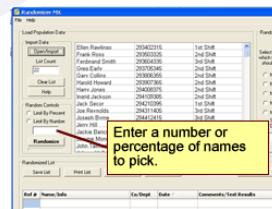

The RandomSelecta - an essential part to any Drugs and Alcohol random/unannounced testing donor selection programme.

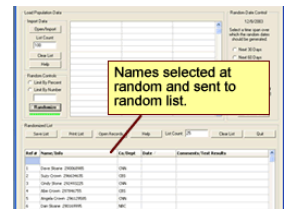

Typical spreadsheet with names/data. You can import Excel spreadsheets or text files with your names, employee numbers or other info.

RandomSelecta Open/Import dialog box. Import/Open files from anywhere on your pc or on your network.

After names are loaded into The RandomSelecta, you can enter a number or percentage of names you'd like selected.

Simply click the 'RandomSelecta' button to select names at random and send them to the random list grid.
